

THINKING BEYOND THE NETWORK

Analog Solutions

There are often times when a paging solution that is “not dependent” on the network is the best choice for a particular customer application. To that end, Valcom continues to offer traditional analog paging solutions in addition to state-of-the-art IP notification solutions. These analog solutions utilize structured cabling like an IP solution but are “self-contained” so that a network/PBX failure will not cause the paging solution to fail.

In 1977, Valcom introduced these self-amplified paging/intercom solutions to the industry and they continue to be highly viable in today’s IP-centric marketplace. These analog solutions can create the foundation for an IP conversion in the future; as a Valcom investment is always protected with a migration strategy to a newer technology.

2000 Series Page Controls

If you prefer a paging solution that is not dependent on the network, consider Valcom's 2000 Series Page Control devices.

A Page Control device provides connection points for inputs and speaker audio outputs. These devices offer multiple options from one to 360 zones, one-way, all call or talkback, pulse/tone dialing, background music, emergency page override for priority announcements, unlimited expansion, built-in tones and battery back-up. Valcom's Page Control devices can also be paired with Valcom's self-amplified ceiling/wall speakers and horns as well as with 25V/70V centrally located amplifiers.

Visit Valcom's website at <http://www.valcom.com> for additional information on ceiling speakers, wall speakers, horns and accessories.

Regardless of whether your requirements call for an IP, hybrid analog and IP, analog self-amplified or a 25V/70V centrally amplified solution, Valcom and Carousel Industries are your go-to partners to help facilitate these discussions.
